

Speech variation under information-theoretic constraints

- How **generalizable** are these findings?
- Most previous studies:
 1. Focused on specific types of variation (duration, merger, lenition, etc.).
 2. Used acoustic data as an estimate of speech production behavior.

Speech variation under information-theoretic constraints

- How **generalizable** are these findings?
- It remains unknown whether information-theoretic constraints:
 1. Are more generally applicable (not restricted to specific variation types).
 2. Behave differently w/ regard to acoustic & articulatory dimensions of variation.
