

Perceptual recoverability, articulatory efficiency & speech flexibility

- Consequently, such flexibility may be a window for the speaker to react differently in the face of variable information-theoretic constraints in the articulatory & acoustic domains.

Research questions

- Does a target phone's distinctiveness as a function of the preceding context phone positively correlate with the bigram's surprisal, given its context within a word?
- If so, would flexibility allow for an enhanced positive surprisal effect in the acoustic domain while leading to a reduced positive effect/a negative effect of surprisal in the articulatory domain?
